	REQUEST FOR INFORMATION FORM	SWML-ENG-001 Revision 0 Page 1 of 1

Project No.:	01-26-020 (26766)	**RFI No.:**	RFI-126020-010
Date:	August 24, 2026	**Discipline:**	Mechanical
Project Name:	26766 – BA2107 TLE End-of-Life Replacement		

Subject:	TLE Channel Cover Lifting Lugs

Specifications/Documents/Drawings Referenced or Impacted:

26766 - CWP-G02 Rev 0.1 - 2021489 – IFC, Section 6.1.9

EA2102D-049 Rev 0.2, “EA-2102D New Lifting Lug Installation” (Work Package, page 92)

Question or Description of Issue:

Section 6.1.9 of the Construction Work Package specifies a lifting lug configuration for the TLE channel covers. Section 6.1.9 states:

> *«INSERT VERBATIM TEXT OF SCOPE SECTION 6.1.9 HERE PRIOR TO ISSUE»*

Field review of the existing TLEs found no channel covers fitted with lifting lugs in the specified configuration.

The only lug arrangement identified on an issued drawing is EA2102D-049 Rev 0.2 (Work Package, page 92), which shows two lugs welded to the EA-2102D channel cover, each rated 21,521 lb in-plane only. Note 10 of that drawing states:

> *“This change is implemented in April 2022, when EA-2102D channel is installed on EA-2107B TLE tube section. These lifting lugs have been designed for this configuration only. Any future change must be re-evaluated by engineering.”*

Installation to this detail also requires 400°F (204°C) preheat, post weld heat treatment at 1250°F (675°C) for 5 hr 45 min, liquid penetrant examination of the first and final weld pass, and a 91 PSIG hydrotest of the channel (Notes 4, 5, 8 and 9).

Originator’s Recommended Solution:

Please confirm whether TLE channel covers fitted with lifting lugs in the Section 6.1.9 configuration exist and, if so, issue the applicable drawings. If they do not, please confirm the required lug configuration and the affected TLE tags, and advise whether design and installation of new lugs is to be treated as a change to scope.

Urgency: Medium (3 days)
